

# Day-8 Task

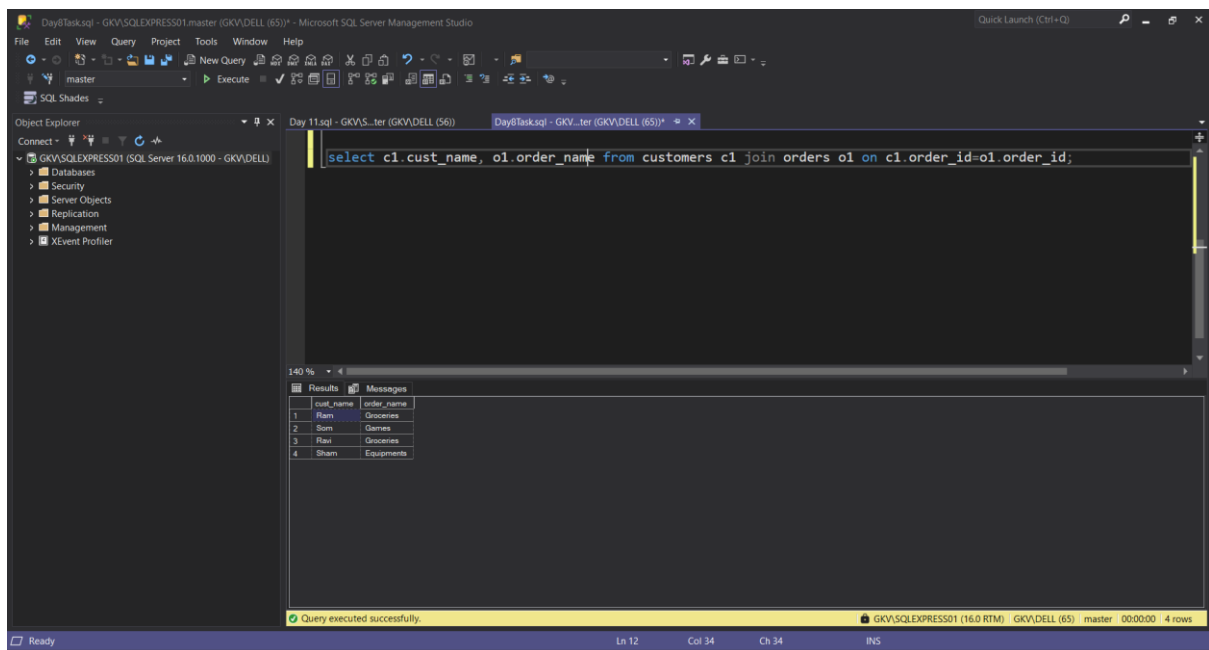

## 1. Create tables customers and orders with a foreign key.

## 2. Insert 5 customers and 5 orders.

### 3. Write INNER JOIN to fetch customer names with their orders.

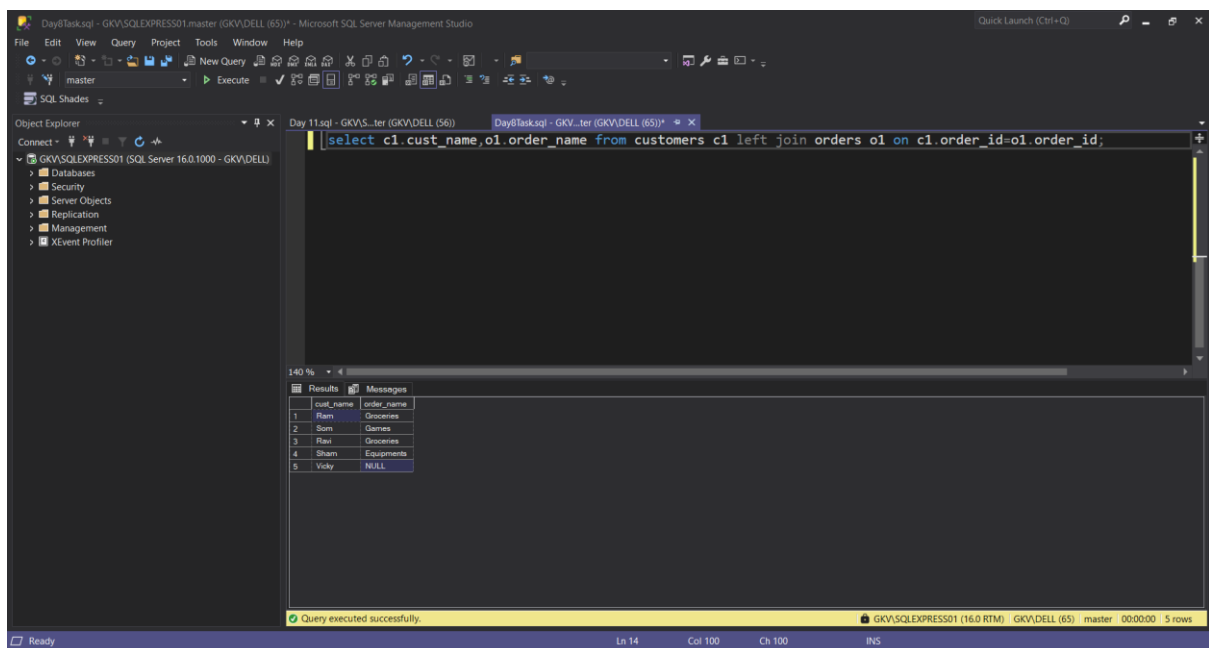

The screenshot shows the Microsoft SQL Server Management Studio interface. The query editor contains the following SQL statement:

```
select c1.cust_name, o1.order_name from customers c1 join orders o1 on c1.order_id=o1.order_id;
```

The query has been executed successfully, and the results are displayed in the Results pane. The status bar at the bottom indicates "Query executed successfully." and "4 rows".

| cust_name | order_name |
|-----------|------------|
| Ram       | Groceries  |
| Sam       | Games      |
| Ravi      | Groceries  |
| Sham      | Equipments |

### 4. Write LEFT JOIN to fetch all customers even without orders.

The screenshot shows the Microsoft SQL Server Management Studio interface. The query editor contains the following SQL statement:

```
select c1.cust_name,o1.order_name from customers c1 left join orders o1 on c1.order_id=o1.order_id;
```

The query has been executed successfully, and the results are displayed in the Results pane. The status bar at the bottom indicates "Query executed successfully." and "5 rows".

| cust_name | order_name |
|-----------|------------|
| Ram       | Groceries  |
| Sam       | Games      |
| Ravi      | Groceries  |
| Sham      | Equipments |
| Vicky     | NULL       |
